

Dear Parents,

Although the scenario below may seem like a Dr. Suss story, this is what is currently happening in the U.S..

- Jane got infected near CPville yesterday, but she won't know that she is infected until 14 days later.
- Jane thinks that she is healthy and goes on to infect 10 people a day.
- These 10 people also believe that they are healthy, they go traveling, and infect another 100 people.
- These 100 people think that they are healthy and go on to infect another 1000 people.
- Now, no one knows who is okay and who can infect you.

PLEASE follow the steps below that you can take to protect yourself and others:

1. Wash your hands frequently
1. Avoid close contact with others
2. Stay at home if you are sick
3. Cover coughs and sneezes with a tissue or the inside of your elbow
4. Clean and disinfect frequently touched surfaces

Please visit <https://www.cdc.gov/coronavirus/2019-ncov/prepare/prevention.html>

I will post additional resources to help you through this challenging journey. We will get through this together!

Mrs. Sue Holtz  
School Nurse
